MOBILE KEY

What is Intelity's Mobile Key Integration and What Does it Do?

Intelity's Mobile Key Integration provides the opportunity for hotels to streamline the check-in process by allowing guests to go straight to the guest room through the use of the Intelity platform on the guest's smartphone. Guests may use the application to opt-in to the use of a mobile key for the duration of their stay.

How Does it Work?

Guest will receive a confirmation email from their hotel with the option to opt-in to a mobile key feature. Guest will be lead to download the hotel app from the app store then they have the ability to request their mobile key. Guest will receive an invitation code and will have to enter the code and their identifying information into the mobile key card in the app. Guests then receive push notification on their mobile device when their key is ready. After completion, guests can use the mobile key through the Intelity app to unlock their guest room door.

What Mobile Keys Does Intelity Integrate With?

1. ASSA ABLOY (Ving)
2. Kaba (Saflok)

What Do I Need to Get Started?

Prior to the integration with Intelity, your hotel must provide the following:

- The specific license or module needed for mobile key integration
